

# DecoMAX

R2293

RGBW power LED star

5 YEARS WARRANTY

CC CONSTANT CURRENT

## FEATURES

- PCB diameter: 20mm
- Up to 530 lm
- Up to 71 lm/W
- CRI 70, 80
- Max Electrical Insulation 60V
- Lifetime > 60000h @ 350mA Tp 85°C
- White and Dynamic White available on request

## APPLICATIONS

Indoor

Commercial

Color Mixing

Decorative

Architectural

# DecoMAX

R2293

RGBW power LED star

**5 YEARS WARRANTY**

**CC CONSTANT CURRENT**

Code	CCT	CRI	Current [mA]	Voltage [V]					Power [W]	Total Lumen [lm]					Lm/W	Energy Efficiency
				R	G	B	W	Tot		R	G	B	W	Tot		
R229301RGBW	RGBW+ 3000K	80	500	2,3	3,3	3,2	2,95	11,75	5,88	66	117	45	137	365	62	G
			700	2,4	3,4	3,3	3,05	12,15	8,5	89	142	61	184	476	56	G
	RGBW+ 4000K		500	2,3	3,3	3,2	2,95	11,75	5,88	66	117	45	167	395	67	G
			700	2,4	3,4	3,3	3,05	12,15	8,5	89	142	61	208	500	59	G
	RGBW+ 5000K		500	2,3	3,3	3,2	2,95	11,75	5,88	66	117	45	190	418	71	G
			700	2,4	3,4	3,3	3,05	12,15	8,5	89	142	61	238	530	62	G

Flux tolerance +/- 10%  
Vf Tolerance +/- 5%

LED and board features	
LED number	1
LED type	CREE XQE2RED or similar CREE XQE2GRN or similar CREE XQE2BLU or similar CREE XQE2 or similar for White
Circuit	1S
Material	MCPCB
Solder	White (Black on request)
Connections	
Cable	Solid wires AWG 24 to 18 (0,2-0,8mm <sup>2</sup> ) Strand wires AWG 22 to 20 (0,32-0,51mm <sup>2</sup> )
Power	
Abs. Max Input current CC	1000mA @ LED
Mechanical Data	
Diameter	19,9mm
Thickness	2.5mm
Conditions	
Max. temp. (Tp)	+90°C
Max. temp. (Tc)	+85°C
Operating temp. Range	-25°C +55°C

CC CONSTANT CURRENT

## MECHANICAL DRAWING

## CIRCUIT CONFIGURATION

Circuit Configuration	
RGBW	All Jumper Not Connected
Dynamic White	2 Jumper connected
All White	All Jumper connected
Colours Position	
D1	RED
D2	GREEN
D3	BLUE
D4	WHITE

## ASSEMBLY AND SAFETY INFORMATION

The LED modules are designed to be incorporated in a final appliance. Installation must be carried out under observation of the relevant regulations and standards. Installation must be carried out in a voltage-free state (i.e. disconnected from the mains). Additionally, the following advice must be observed; non-observance can result in electrical, mechanical and/or fire hazards.

- ESD (electrostatic discharge) protection measures must be observed when handling and installing the LED modules.
- Transient protection measures (as per IEC 61000-4-5), especially for outdoor applications, must be observed (e.g. SPD).
- Adequate anti-static electricity measures, including the use of conductive shoes, ionizers, work bench grounding, wrist straps, flooring and stools should be used.
- LED assembly modules must not be subjected to any undue mechanical stress, e.g.:
  - Do not treat as bulk cargo.
  - Avoid sharing and compressive forces during handling and installation.
  - Do not damage circuit paths.
  - Avoid any pressure on the light emitting surface.
- Safe operation is only possible using proper external sources (e.g: constant current sources - I<sub>max</sub>. see table "Electrical Characteristics").
- Operate only with power supply units that feature the following protection:
  - Short-circuit protection
  - Overload protection
  - Overheating protection
- The module can be fixed with M3 screws. They are recommended to be fixed only with flat or cylinder head screws (M3) (no countersunk screws – if not differently specified). Max. torque: 1.2 Nm (M3)
- Please ensure the correct polarity of the leads prior to applying power. Reversed polarity can destroy the modules.
- For interconnection, the LED modules are usually equipped with push-in terminals. Custom connectors are available upon request during the project bidding stage.
- General Safety regulations acc. to IEC/EN 60598-1 (or specific standards related to different lighting applications) must be observed.
- The following points must be observed when connecting LED modules in parallel:
  - All LED strings that are wired in parallel must contain the same number of LEDs (symmetrical loading).
  - Owing to differing forward voltage, there can be a difference of up to 10% in brightness between modules connected in parallel.
  - For this installation setup, please notify us when placing your order.
- To ensure problem-free operation, the specified maximum temperature at the tp point (see "Operating Life") must be observed (and measured in accordance with IEC 62717 – Annex H).
- In the event of outdoor applications or applications in damp locations, care must be taken to protect LED modules against humidity, splashes and jets of water. Any corrosion damage resulting from humidity or contact with condensation will not be recognized as a defect or manufacturing fault. LED modules are not specifically protected against foreign bodies or dust. Depending on the type of application, further protection must be provided to prevent ingress.
- Due to the manufacturing process, the PCBs of the LED modules can have sharp edges and corners. Care must therefore be taken during handling and installation to avoid injury.
- Constant current drivers require for an optimal usage that the modules are connected in series. For this type of usage, there must be ensured that the quantity of LED modules is limited by the sum of forward voltage and the capacity of used constant current driver. Safety regulations acc. to IEC/EN 60598 must be observed if the sum of forward voltage exceeds the permitted touchable value.
- There is a list of chemical substances (as sulfur) that has been proved to make the LED module damaged. Also, in chemically enriched (aggressive) environments the LED module functionality can be compromised, or they can even cause total module failure. Keep attention to this aspect before installing the LED module.
- The photobiological safety of the LED modules must be classified into risk groups in accordance with IEC/EN 62471 and IEC/EN 62471-7.

## APPLIED STANDARDS

IEC / EN 62031  
LED modules for general lighting – Safety specifications

IEC 62717  
LED modules for general lighting - Performance requirements

IEC/EN 60598-1  
Luminaires – Part 1: General requirements and tests

IEC/EN 62471  
Photobiological safety of lamps and lamp systems

IEC 61000-4-5  
Electromagnetic compatibility (EMC) – Part 4-5: Testing and measurement techniques – Surge immunity test
